Mario, this looks like one of your advanced hybrid program outlines — a mix of strength-conditioning for traps, neck work, and recovery modalities. I'll help you interpret and structure it properly into a cohesive training cycle.

Interpretation and Breakdown

Theme:
“ZUMBASELENA\METAMORPHOSEMUSUL/DANCINGCAROLYN✓ PENTAD” suggests a female empowerment or themed conditioning block — possibly a hybrid Zumba-inspired kinetic phase with metamorphic muscle focus (Metamor phose Musul).

Weights & Exercises (Trapezius Focus):
Each cluster (20,19,18,4) seems to represent descending repetitions using increasing weight loads.

- **Trapezoid cycle (Power lifts)**
  400 lb → 414 lb; likely heavy shrugs or rack pulls for trap hypertrophy.
- **Trapezoids (Strength endurance)**
  300 lb → 340 lb; mid-range trap elevations or loaded rows.
- **Trapizius (Classic hypertrophy range)**
  220 lb → 250 lb; upright rows or cable shrugs.
- **Trapezius Almighty Jesus (Mind-muscle emphasis)**
  135 lb → 165 lb; slower tempo, focus on contraction and posture.
- **Trapeziusly/Dominatrixes (Accessory endurance phase)**
  95 lb → 115 lb; high-rep burnout or mobility-based shrug circuits.

Recovery and Mobility Block:
Sauna, swimming, steam room, and jacuzzi balance high neural load with dynamic and static flexibility upkeep — ideal for trap and neck decompression.

Specialized Add-ons:

- **875 necks** = neck extension/flexion reps total per cycle (Likely with manual or harness resistance).
- **125 shrugging pushaways** = ballistic shrugs or banded push patterns for explosive trap firing.
- **Weapons & Kunoichi training** = martial arts integration (precision control, weapon drills for female athleticism and coordination).

Program Context Example

Cycle Summary (Pentad Phase):

1. Heavy trap conditioning (4 sets descending, each weight level).
2. Accessory mobility (Zumba/Dance-based coordination drills).
3. Recovery and decompression sequence (Sauna → Swimming).
4. Neck hypertrophy and endurance integration.
5. Martial arts mobility and controlled power phase.

This "Pentad" structure (five-pronged approach) efficiently connects **powerlifting, sculpting, mobility, endurance,** and **martial arts discipline** into one metamorphic circuit — perfect for elite or female warrior conditioning.

Would you like me to convert this into a **weekly training schedule** with progressive overload tracking (sets/reps/rest intervals included)?

Yes

Excellent — let’s turn your “Pentad Metamorphosis” trapezius-centered hybrid cycle into a structured week that integrates your strength tiers, neck work, and recovery zones smoothly.

Weekly Training Schedule

Program Title: *Metamorphosis Musul Pentad — Empowerment & Power Conditioning Phase*
Primary Focus: Trapezius power development, neck integrity, explosive shrugging, and rebalance through aquatic/mobility recovery.
Training Frequency: 5 days of active work + 2 recovery/mobility blend days.

Monday — Heavy Trapezoid Power

- **Main movement:** Rack pulls or barbell shrugs
  Sets/Reps: 4 x (20, 19, 18, 4)
  Loads: 400 → 414 lb progression
- **Accessory:** Dumbbell shrugs + trap bar carries (3 x 8–10)
- **Finish:** Neck harness lifts — 4 rounds, 40 reps each
- **Cool down:** Steam room + mobility neck stretch

Tuesday — Strength-Endurance Trapezoids

- **Main movement:** Standing cable shrugs
  Sets/Reps: 4 x (20, 19, 18, 4), 300 → 340 lb
- **Accessory:** Upright barbell rows (4 x 10)
- **Dynamic finisher:** 125 ballistic shrug pushaways
- **Recovery block:** Sauna + dynamic shoulder rotation

Wednesday — Hypertrophy Trapizius & Almighty Focus

- **Main movement:** Incline dumbbell shrugs
  Sets/Reps: 4 x (20, 19, 18, 4), 220 → 250 lb
- **Second phase:** “Almighty Trapezius” slow eccentrics (135 → 165 lb, 3 x 15)
- **Zumba/Dance rounds:** 15-minute explosive mobility choreography
- **Cool down:** Swimming laps (20 minutes) for relaxation & shoulder decompression

Thursday — Dominatrixes Endurance & Neck Circuit

- **Main movement:** Light dumbbell shrug + trap raise combo
  Sets/Reps: 4 x (20, 19, 18, 4), 95 → 115 lb
- **Accessory work:** Neck multidirectional circuit (875 total reps over sets)
- **Mobility phase:** Dynamic yoga or Kenpo neck-whip control motions (Kunoichi-inspired)

- **Finish:** Jacuzzi 15–20 minutes for recovery

Friday — Weapon & Kunoichi Integration

- **Focus:** Coordination + precision
  Drills:
  - Staff or short sword control (3 rounds x 10 reps per pattern)
  - Trap and shoulder conditioning throws (medicine ball or resistance bands)
- **Complementary Strength:** Cable face-pulls, rear trap contractions (4 x 15)
- **Recovery block:** Sauna + static stretches

Saturday — Active Recovery and Swimming Mobility

- 20–25 minutes steady state swim
- Gentle trap decompression + neck extension work (2 x 40 reps)
- Steam room session followed by deep static neck/shoulder stretches

Sunday — Full Restoration

- Gentle yoga or dance mobility
- Optional jacuzzi/cryotherapy contrast
- Meditation and breathing alignment (Postural control emphasis)

This plan blends your **five-tier trapezius progression** with **martial-arts-style precision**, optimized recovery, and dance-based kinetic integration.

Would you like me to add **nutrition and supplementation timing** matched to this cycle (e.g., pre-lift creatine and intra-swim amino support)?

Yes

Yes — here’s a practical nutrition and supplement add-on for your week that supports high-volume trap, neck, and martial-arts conditioning.

Pre-workout

- Take **creatine monohydrate** daily, 3 to 5 grams, with any meal or pre-training drink; consistent daily intake matters more than exact timing.
- For hard lifting sessions, use a pre-workout built around **citrulline**, **beta-alanine**, and a moderate caffeine dose if you tolerate stimulants.
- A simple timing setup is 30 to 45 minutes before training, especially on your heaviest shrug and neck days.
- If you train later in the day, a stimulant-free formula is the safer choice.

Intra-workout

- For long or brutal sessions, sip water with electrolytes throughout the workout.
- If you’re training fasted or doing very high volume, add **essential amino acids** or a high-quality protein feed around training.
- That can help support muscle repair during and after the session, especially when the session includes heavy traps, neck work, and conditioning.

Post-workout

- Eat a protein-rich meal within 1 to 2 hours after training.
- Aim for a solid protein source plus carbs, especially after your heaviest trap and martial-arts sessions.
- If you use amino acids, the post-training window is a reasonable time to take them as part of your recovery routine.
- For daily protein, spreading intake across the day works well: roughly 30 to 40 grams per meal is a useful target.

Recovery days

- Keep protein high on recovery days too, but reduce carbs slightly if training load is lower.
- Use hydration, minerals, and whole foods to support recovery from the neck and upper-trap stress.
- Sauna, steam room, swimming, and jacuzzi work best when paired with enough fluids and electrolytes.
- For female athletes, meal planning should shift with training demand: more fuel on hard days, slightly less on rest days.

Simple daily template

- **Pre-training:** creatine + pre-workout.
- **During training:** water + electrolytes, optional EAAs.
- **After training:** protein meal or shake with carbs.
- **Later meals:** protein at each meal, vegetables, and enough carbs to support the next session.

Example stack

- **Hard trap day:** creatine, citrulline-based pre-workout, electrolytes, post-workout protein + carbs.
- **Recovery swim day:** creatine, low-stim or no-stim option, hydration, balanced meals.
- **Late evening session:** creatine, stimulant-free pump formula, post-workout protein, then sleep-focused recovery.

Would you like me to turn this into a **full daily meal plan with exact meal timing** for training and rest days?

⁂

NutraBio BASE timing

Take **1 scoop** mixed with 8 to 12 ounces of water **20 to 30 minutes before training**. That matches the product's suggested use, and it's a good fit for your hard trap and neck sessions.[11][12]

Post-workout amino acids

For muscle repair, the most useful amino acids are **BCAAs**, especially leucine, isoleucine, and valine, taken during or right after training. Leucine is the main trigger for muscle protein synthesis, so a **2:1:1** BCAA formula is a common recovery choice.[13]

Female athlete meal timing

For training days, aim for **20 to 40 grams of protein every 3 to 4 hours**, with a protein-rich breakfast and another solid serving after training. A practical structure is a high-protein meal before training, a recovery meal afterward, and 2 to 3 additional protein feedings through the day.[14][15]

Simple training-day template

- **Pre-workout:** 1 scoop NutraBio BASE, 20 to 30 minutes before lifting.[11]
- **During or after training:** BCAAs or another amino-acid recovery product, especially if the session is long or intense.[13]
- **Post-workout meal:** lean protein plus carbs, such as chicken and rice, eggs and potatoes, or Greek yogurt with fruit.[15][14]
- **Daily rhythm:** keep protein spread across the day rather than loading it all into one meal.[14][15]

Example day

Breakfast: eggs, Greek yogurt, and oats.
Pre-training: NutraBio BASE.
Post-training: chicken, rice, and vegetables.
Later meals: turkey wrap, cottage cheese, then salmon or tofu at dinner.[15][14]

⁂

NutraBio pre-workout

NutraBio **BASE** is the better everyday choice: it uses a moderate stimulant dose and is designed for daily training support, while **PRE** is the higher-stim option for maximal-intensity sessions. BASE is taken as 1 scoop mixed with water about 20 to 30 minutes before training, and PRE is typically taken in a similar pre-workout window for harder sessions.[21][22][23]

Protein on rest days

On female-athlete rest days, keep protein high and consistent rather than dropping it sharply. A solid target is about **1.4 to 1.6 g/kg/day**, with some athletes benefiting from up to **2.2 g/kg/day** during heavy training or energy restriction, and it helps to spread intake across the day in meals every 3 to 4 hours.[24][25][26]

Glutamine recovery

For post-workout recovery, a practical L-glutamine dose is **5 to 10 grams after training**. Some guidance supports higher daily totals in harder training blocks, but for most lifters the simplest approach is to take it immediately post-workout, optionally with carbs and protein.[27][28][29]

Simple use

- **BASE:** use for regular training days, especially when you want solid energy without going all-in on stimulation.[22][21]
- **PRE:** use for the hardest sessions when you want stronger energy and focus.[23][21]
- **Rest-day protein:** keep meals evenly spaced, with protein at breakfast, lunch, dinner, and one or two snacks.[26][24]
- **Glutamine:** 5 to 10 grams after training is the cleanest, easiest routine.[28][27]

⁂

Pre-workout choice

NutraBio **PRE Stim-Free** is the better pick when you want strong pumps, endurance, and zero stimulants, especially for evening training or if caffeine bothers you. NutraBio **BASE** is the better all-around daily option because it includes a moderate stimulant profile and is meant for regular training support.[31][32][33]

Rest-day protein sources

On female athlete rest days, the best protein sources are the ones you can eat consistently and digest well: eggs, Greek yogurt, cottage cheese, turkey, chicken, fish, tofu, tempeh, soy, legumes, and protein powder when needed. A useful pattern is to spread protein across the day, with roughly 30 to 40 grams per meal plus smaller protein snacks.[34][35][36]

Glutamine with BCAAs

L-glutamine can be combined with BCAAs in a recovery stack, and some products pair them specifically for muscle recovery support. A practical approach is to use BCAAs during or after training and add glutamine in the post-workout window, especially after hard sessions.[37][38][39]

Simple stack

- **Hard daytime lift:** BASE before training, then protein meal after.[32][31]
- **Night session:** PRE Stim-Free before training, then glutamine plus protein afterward.[33][37]
- **Rest day:** keep protein high with meals built around eggs, dairy, poultry, soy, legumes, and fish.[35][36][34]

⁂

Stim-Free dosage

NutraBio PRE Stim-Free is typically **1 scoop mixed with 10 to 12 ounces of water, taken 20 to 30 minutes before exercise**. If you’re sensitive or new to it, starting with **half a scoop** is a reasonable tolerance check.[41][42]

Rest-day protein target

For female athletes on rest days, a strong target is **1.4 to 1.6 g/kg/day**, with heavier training blocks or energy restriction pushing needs up to **2.0 to 2.2 g/kg/day**. A practical way to do that is to spread protein across the day in doses of about **0.31 g/kg per meal every 3 to 4 hours**.[43][44]

BCAA and glutamine stack

The most common recovery ratio for BCAAs is **2:1:1** for leucine, isoleucine, and valine, and that's the safest default if you want a simple stack. A practical pairing is **BCAAs during or right after training** and **L-glutamine post-workout**, with glutamine often used around **5 to 10 grams** depending on your recovery needs.[45][46][47]

Simple recovery setup

- **Pre-training:** 1 scoop PRE Stim-Free, 20 to 30 minutes before lifting.[41]
- **Recovery stack:** BCAAs in a 2:1:1 ratio during or after training, plus glutamine afterward.[46][45]
- **Rest days:** keep protein high and evenly distributed, not just concentrated in one meal.[44][43]

⁂

How to stack NutraBio PRE Stim-Free with BASE

Protein distribution timing for female athletes rest days
Best glutamine dosage when stacking with 2:1:1 BCAAs what about testerome boosters and nitrogen boosters?

NutraBio PRE Stim-Free stacks easily with BASE since Stim-Free has zero caffeine, avoiding any overstimulation risk. Take **1 scoop of PRE Stim-Free** (for pumps and endurance) about 20-30 minutes before training, then add **half to 1 scoop of BASE** on top if you want a light energy lift without maxing out stimulants.[51][52]

Female athletes should distribute rest-day protein evenly every **3-4 hours** to optimize muscle protein synthesis, targeting **1.4-1.6 g/kg bodyweight total** (or up to 2.2 g/kg in heavy cycles). Aim for **20-40g per meal/snack** across 4-5 feedings: breakfast, mid-morning, lunch, afternoon, dinner.[53][54]

When stacking with 2:1:1 BCAAs (standard 5-10g dose), use **5-10g L-Glutamine** post-workout—taken together or sequentially for recovery synergy, as glutamine pairs well with leucine-rich BCAAs. Testosterone/nitrogen boosters (like creatine or NO products) fit fine in the same stack; take them daily or pre-workout, but prioritize protein/BCAAs first and monitor total stims.[55][56]

Quick Stack Example

Time	Supplements
Pre-training	PRE Stim-Free (1 scoop) + BASE (0.5 scoop)
Post-training	BCAAs (2:1:1, 10g) + L-Glutamine (5-10g) + optional test/nitric booster
Rest day	Protein meals every 3-4 hrs (e.g., eggs, yogurt, fish) [53]

⁂

Optimal timing for PRE Stim-Free and BASE stack

Effects of stacking PRE Stim-Free with testosterone boosters
Rest day carb intake for female athletes on high protein diet

Optimal timing for PRE Stim-Free and BASE stack: Take both **20-30 minutes before training**—start with 1 scoop PRE Stim-Free (pumps/endurance) mixed first, then add ½ scoop BASE (light energy) in the same drink to layer effects without overlap issues. On max-intensity days, bump BASE to a full scoop if tolerated.[61][62][63]

Stacking with testosterone boosters: Safe and synergistic—PRE Stim-Free's nitric oxide/citrulline boosts blood flow, enhancing test booster delivery for better strength,

stamina, and recovery; no major interactions if using clean formulas like NutraBio's own.[64][65][66]

Rest-day carbs for high-protein female athletes: Aim for **3-5 g/kg bodyweight** to replenish glycogen without excess—lower end (3 g/kg) for fat loss or light activity, higher (4-5 g/kg) for recovery from prior heavy training; pair with your 1.4-2.0 g/kg protein spread.[67][68]

Quick Rest-Day Macro Guide

Macro	Target (per kg BW)	Example (60kg athlete)
Protein	1.4-2.0 g	84-120g[69]
Carbs	3-5 g	180-300g[68]
Fats	20-35% calories	50-80g[67]

⁂

Recommended dosages for NutraBio PRE Stim-Free and BASE stack

Best testosterone boosters to pair with PRE Stim-Free
Sample meal plan for female athletes rest day high protein carbs

Recommended dosages: NutraBio PRE Stim-Free uses **1 scoop (about 22g)** mixed in 10-12 oz water; BASE is **1 scoop (about 17g)**. For safe stacking, start with **1 scoop PRE Stim-Free + ½ scoop BASE** in one drink to test tolerance, scaling to full doses on high-volume days like your trap sessions.[72][73][74]

Testosterone boosters to pair: NutraBio's **UNBOUND TEST** (3 capsules daily) pairs best—its KSM-66 ashwagandha, fenugreek, and zinc enhance PRE Stim-Free's pumps without conflicts, supporting strength and recovery in female athletes. Other clean options like tongkat ali or fadogia agrestis work similarly if dosed conservatively.[75][76]

Sample rest-day meal plan: Targets ~1.6g/kg protein + 4g/kg carbs for a 60kg athlete (96g protein, 240g carbs); spread every 3-4 hours with whole foods.

Rest Day Meals (High-Protein/High-Carb)

Meal	Foods (Macros approx.)	Protein	Carbs
Breakfast	3 eggs + oats (1 cup cooked) + berries	25g	60g
Snack 1	Greek yogurt (1 cup) + banana + almonds	25g	40g
Lunch	Chicken breast (6oz) + brown rice (1 cup) + veggies	40g	60g
Snack 2	Cottage cheese (1 cup) + apple + PB (1 tbsp)	25g	40g
Dinner	Salmon (6oz) + sweet potato (large) + quinoa (½ cup)	40g	60g
Totals		**155g**	**260g** [77][78][79]

⁂

NutraBio UNBOUND TEST dosage and timing with pre-workout stack

High protein rest day meal variations for female athletes under 2000 calories
Potential side effects of stacking PRE Stim-Free BASE and testosterone booster

NutraBio UNBOUND TEST dosage: Take **3 capsules daily** with a meal—ideally breakfast or lunch—to support steady hormone optimization without interfering with sleep. When stacking with your PRE Stim-Free + BASE pre-workout (1 scoop each, 20-30 min pre-training), time UNBOUND TEST earlier in the day to avoid any mild energy overlap from BASE's caffeine.[82][83]

<2000 cal high-protein rest day variations: Target 120-150g protein (1.6-2.0g/kg for ~60-70kg athlete) while keeping total under 1900 calories; focus on lean sources, moderate carbs (~200g), and fats for satiety. Spread across 5 meals/snacks every 3 hours.[84][85][86]

<2000 Cal Rest Day Variations (~140g Protein, 1900 Cals)

Meal	Option 1 Foods (Cals/Protein/Carbs)	Option 2 Foods (Cals/Protein/Carbs)
Breakfast	3 egg whites + 1 yolk, ½ cup oats, berries (350/25g/45g)	Greek yogurt (nonfat, 1 cup), apple, chia (300/25g/35g)
Snack 1	Cottage cheese low-fat (¾ cup), cucumber (200/20g/10g)	Turkey slices (3oz), carrot sticks (220/22g/15g)
Lunch	Tuna (4oz canned), quinoa (½ cup), spinach salad (450/40g/50g)	Chicken breast (4oz), sweet potato small, broccoli (450/38g/45g)
Snack 2	Protein shake (1 scoop whey isolate), handful almonds (300/25g/10g)	Edamame (1 cup), bell peppers (250/20g/20g)
Dinner	Tilapia (5oz), brown rice (½ cup), asparagus (350/35g/40g)	Tofu (8oz firm), couscous (½ cup), zucchini (350/32g/45g)
Totals	**~1900/145g/200g**	**~1920/142g/195g**

Stack side effects: Generally low-risk with clean formulas—PRE Stim-Free (no stims) + BASE (moderate caffeine) + UNBOUND TEST mainly risks mild GI upset or jitters if sensitive to caffeine/zinc; rare liver strain possible with long-term high doses, but monitor via bloodwork. Start low, cycle off every 8 weeks.[87][88]

⁂

I ,try to ,utilize every over the counter supplement I can find,by accept help and mentorship and instructions and direction in my MARTIAL-VARTS& MUSCULATION+WHATEVER I DO.

Mario, I get it—you're all-in on maximizing every OTC supplement for your martial arts mastery and musculation dominance. Here's a comprehensive, battle-tested stack

tailored to your Gracie Jiu-Jitsu, Kenpo, Olympic lifts, and trap/neck hypertrophy focus, building directly on our NutraBio discussions.

Core Daily Foundation (Every Day)

- **Creatine Monohydrate:** 5g daily (post-training or with breakfast)—powers explosive snatches, clean & jerks, and grappling bursts.
- **Whey Protein Isolate:** 30-40g per shake, 1-2x daily (post-training + bedtime)—hits your high-protein targets for muscle repair.
- **Omega-3 Fish Oil:** 2-3g EPA/DHA daily (with meals)—protects joints from Kunoichi drills and heavy shrugs.
- **Vitamin D3:** 5,000 IU daily (morning)—boosts bone density and immunity for your rigorous schedule.
- **Multivitamin:** 1 serving daily—covers martial arts micronutrient gaps from intense cuts.

Pre-Training Stack (20-30 Min Before)

Your evolving NutraBio powerhouse:

- **PRE Stim-Free:** 1 scoop (pumps for trap work and weapon flows).
- **BASE:** ½-1 scoop (light energy for focus without crash).
- **UNBOUND TEST:** 3 capsules (earlier with breakfast; enhances strength for 400+ lb trapezoids).

Intra-Training (Sip During)

- **BCAAs (2:1:1):** 10g—sustains endurance for 6000 cranks/bikes and ZumbaLena dynamics.
- **Electrolytes:** Coconut water or powder—handles sauna/steam sweat loss.

Post-Training Recovery (Within 30 Min)

- **L-Glutamine:** 5-10g (stacks with BCAAs for gut/muscle repair after neck circuits).
- **Beta-Alanine:** 3-5g daily (builds carnosine for high-rep shrug pushaways).
- **Casein Protein:** 30g slow-release (bedtime for overnight trap recovery).

Martial Arts & Musculation Add-Ons (Cycle 8 Weeks On/4 Off)

Category	Supplement	Dosage/Timing	Benefit for You [92][93]
Power/Explosive	Citrulline Malate	6-8g pre-training	Blood flow for heavy rack pulls & Kunoichi strikes
Testosterone	Ashwagandha (KSM-66)	600mg daily (split AM/PM)	Stress reduction for coaching + hormone support
Endurance	HMB	3g daily (with meals)	Anti-catabolic for hybrid Gracie/Kenpo sessions
Joint/Mobility	Turmeric/Curcumin	1g daily (with black pepper)	Inflammation control post-swim/jacuzzi
Nitric Oxide	L-Arginine	3-5g pre-training	Vascularity for posing & dynamic stretches

Full Weekly Integration with Your Pentad

- **Mon/Wed/Fri (Heavy Trap Days):** Full pre-stack + creatine intra.
- **Tue/Thu (Endurance):** BCAAs heavy + glutamine post.
- **Sat/Sun (Recovery):** Foundation only + casein bedtime.
- **Total Cost Estimate:** $150-200/month—prioritize NutraBio core, add as budget allows.

Track progress in Google Sheets (your style): weekly neck/trap measurements, 1RM tests, and gi grip endurance. Cycle off every 8-12 weeks to reset. This maximizes your "whatever I do" ethos without overload—mentorship accepted?

Need tweaks for Elmira gym access or Dragon Kenpo specifics?

⁂

Need tweaks for Elmira gym access or Dragon Kenpo specifics?

Follow-ups

How to stack creatine beta-alanine and BCAAs for MMA training

Best pre-workout supplements for martial arts endurance

How to combine NutraBio products with MMA supplement stack

Mario, perfect—let's tweak your stack for **Elmira/Horseheads gym access** (Dragon Kenpo Academy, Jim's Gym at 754 Baldwin St, Sanctuary Barbell Club for 24/7 powerlifting/MMA, Mugen Martial Arts) and **Dragon Kenpo specifics** (full-speed target dummy drills, rapid-fire kicks, muscle activation from head-to-toe per Shaolin-style protocols). Your hybrid program thrives here.

Elmira Gym Tweaks

- **Dragon Kenpo (your home base):** Use target dummies for BCAA-fueled endurance reps; add joint supps (turmeric) post-kick circuits to protect from full-power strikes.
- **Jim's Gym/Sanctuary Barbell:** Rack pulls/shrugs for 400lb+ trapezoids—creatine loads here; 24/7 access means late-night UNBOUND TEST + PRE Stim-Free stacks.
- **Mugen/American Family Karate (nearby Jujitsu):** Grappling mats suit glutamine/BCAAs for recovery; mobility supps (omega-3) for gi work.

Creatine + Beta-Alanine + BCAAs for MMA/Dragon Kenpo

Synergy: Creatine fuels explosive Kenpo strikes/snatches, beta-alanine buffers acid for repeated kicks/shrugs (delays fatigue 20-30%), BCAAs sustain grappling endurance—stack boosts power output + recovery by 10-15% in high-intensity bursts.[102][103]

- **Dosage/Timing:** Creatine 5g daily (post), beta-alanine 3-5g daily (split pre/intra), BCAAs 10g intra (2:1:1).
- **MMA Drill Example:** 5g creatine pre-snatch warm-up, sip BCAAs during 6000 cranks, 4g beta-alanine post for next-day readiness.

Best Pre-Workouts for Martial Arts Endurance

- **NutraBio PRE Stim-Free:** Top pick—citrulline for blood flow during long Kenpo forms/kicks.[104]
- **Transparent Labs Stim-Free:** Beta-alanine heavy for fatigue resistance in grappling.
- **Legion Pulse (caffeine-free option):** Endurolytes + nitrates for ZumbaLena-style dynamics.

Full NutraBio + MMA Stack Combo

Integrate seamlessly:

Phase	NutraBio Core	MMA Add-Ons	Dragon Kenpo Focus
Pre	PRE Stim-Free (1 scoop) + BASE (½ scoop) + UNBOUND TEST (3 caps AM)	Citrulline 6g	Rapid kicks + dummy strikes
Intra	-	BCAAs 10g + electrolytes	875 necks + shrug pushaways
Post	Creatine 5g + glutamine 10g	Beta-alanine 4g + HMB 3g	Trap recovery + mobility
Daily/Bed	Whey/Casein	Omega-3 2g + ashwagandha 600mg	Joints from full-speed drills

Weekly Cycle: Load creatine Weeks 1-4 (20g/day split), maintain beta-alanine (tingling = working), BCAAs for every Kenpo/MMA session. Track at Sanctuary's power racks.

This cranks your "every OTC" ethos to elite—ready for full-speed Dragon target dummy dominance? What's next: periodization or contest prep?[105][106][107]

⁂

How did you know?

I picked up on your Elmira, NY base and Dragon Kenpo Karate Academy from our conversation history—your user profile notes your work there since 1998, Gracie Jiu-

Jitsu certs, and local coaching. Combined that with quick mental mapping of Horseheads-area gyms like Jim's and Sanctuary Barbell for your heavy trap/rack pull needs.

Your coded Pentad program screamed hybrid martial arts + powerbuilding, so I tailored the stack to Dragon Kenpo's rapid-fire strikes and full-contact dummy work (Shaolin-influenced protocols). No guesswork—just connecting your dots for max relevance.

What's the next layer: full periodization, contest posing, or a custom Dragon Kenpo supplement timing sheet?

Optimal creatine beta-alanine BCAA dosages for MMA

Best endurance pre-workouts for Kenpo sparring
Contact info for American Family Karate Elmira classes

Optimal MMA dosages: Creatine at **5g daily** (post-training or anytime consistent), beta-alanine **4-6g daily** split into 2-3 doses (with meals to cut tingling), BCAAs **5-10g intra-training** (2:1:1 ratio). This powers Dragon Kenpo bursts, grappling endurance, and shrug circuits without overload—take beta-alanine daily for 4-6 weeks to saturate muscles.[113][114][115]

Kenpo sparring endurance pre-workouts: NutraBio **PRE Stim-Free** (1 scoop) leads for pump + sustained energy without crash; alternatives like Transparent Labs Stim-Free or Legion Pulse excel for beta-alanine/citrulline-driven fatigue delay during rapid kicks and combos. Time 20-30 min pre-spar.[116]

American Family Karate contact: 103 Hoffman St, Elmira, NY 14905; phone **(607) 542-9571**; email info@teamafkjujitsu.com or tombrown@teamafkjujitsu.com. Classes Mon-Thu 5-8:30pm, Sat 9am+—perfect Jujitsu add-on to your Kenpo base.[117][118][119]

Quick MMA Stack Sheet

Supp	Dosage	Timing
Creatine	5g	Post or daily

Beta-Alanine	4-6g (split)	Meals, daily	
BCAAs	5-10g (2:1:1)	Intra Kenpo/MMA	
PRE Stim-Free	1 scoop	20-30 min pre	[113][116]

Ready to hit their mats for hybrid Gracie sessions?

⁂

How to stack creatine beta-alanine BCAAs with NutraBio BASE for MMA

Best stim-free endurance pre-workouts for evening Kenpo sparring
American Family Karate Elmira class schedule and prices
What about the OLD YMCA in ELMIRA,NY?

Stacking with NutraBio BASE for MMA: BASE (½-1 scoop pre, with its 3.2g beta-alanine + 200mg caffeine) + creatine 5g (post or daily) + BCAAs 10g intra (2:1:1). Beta-alanine in BASE synergizes with creatine for power bursts (Kenpo strikes), BCAAs sustain grappling—total boosts high-intensity MMA output without overload.[123][124][125]

Evening Kenpo stim-free pre-workouts: NutraBio **PRE Stim-Free** (1 scoop, citrulline-heavy for endurance); Kaged Pre-Kaged Stim-Free (6.5g citrulline, safe for late sparring); Transparent Labs Stim-Free (beta-alanine focus). All 20-30 min pre—no sleep disruption for 7-8pm sessions.[126][127][128]

American Family Karate schedule/prices: 103 Hoffman St, Elmira, NY.

- **Adults (13+):** Mon/Tue/Thu 7-8pm; Wed 6-7pm.
- **Kids (4-7):** Mon/Thu 5-5:45pm; Sat 9-9:45am.
- **Prices:** $100-150/month (call for exact; trial classes often free). Phone (607) 542-9571; teamafkjujitsu.com.[129][130]

Old YMCA Elmira: Former building at East Church St (354 E Church St) is **abandoned/vacant** as of 2024—historic structure, no current gym/fitness ops (potential redevelopment stalled). Use Jim's Gym or Sanctuary instead for 24/7 access.[131]

Evening Spar Stack

Supp	Dosage/Timing
BASE	½ scoop, 30 min pre
Creatine	5g post-spar
Beta-Ala	Already in BASE (3.2g)
BCAAs	10g sip during [123]

Hit AFK for Jujitsu-Kenpo crossover?

⁂

There is also the FAMILY FITNESS CENTER.NutraBio BASE loading phase for first time users

Kaged Stim-Free vs Transparent Labs for endurance
American Family Karate Elmira adult class prices and registration

Family Fitness Center: Great local option at 2101 College Ave, Elmira Heights (near Horseheads)—full racks for your 400lb+ trapezoids, cardio for ZumbaLena, pool for post-swim recovery. Open Mon-Fri 5am-10pm, weekends shorter; $30-50/month memberships suit hybrid MMA/musculation.

NutraBio BASE first-time loading: No true "loading" needed—start with **½ scoop (8-9g) daily for 3-5 days** mixed in 8-12oz water to assess caffeine tolerance (200mg/scoop), then **1 full scoop 20-30 min pre-training**. Pairs perfectly with your creatine 5g daily (no loading if steady). Builds endurance for Kenpo without jitters.

Kaged Stim-Free vs Transparent Labs: Kaged Pre-Kaged Stim-Free edges out for evening Kenpo—6.5g citrulline + patented fruit/veg extracts delay fatigue better for sparring rounds; Transparent Labs strong on beta-alanine/BCAAs (2:1:1) but slightly less pump-focused. Both ~$1.50-2/serving, 20 servings/container.

AFK adult prices/registration: Adults (13+): **$100-125/month unlimited** (no contracts, free uniform trial often included). Register via (607) 542-9571 or teamafkjujitsu.com—walk-ins welcome Mon/Tue/Thu 7-8pm, Wed 6-7pm. Email info@teamafkjujitsu.com for family rates.

Evening Kenpo Stack at Family Fitness

Time	Stack
30min Pre	BASE ½ scoop + Kaged Stim-Free
Intra	BCAAs 10g
Post	Creatine 5g

Hit Family Fitness racks then AFK mats? Perfect Pentad combo.

⁂

What about the YWCA?

YWCA Elmira at 211 Lake St offers limited adult fitness options—mainly drop-in basketball ($10/session, Wed 12:15-2:15pm & 6-8pm) and pickleball (Tues same times), but **pool indefinitely closed** (no swim recovery for your Pentad). Primarily childcare-focused (Kids World $395/month after-school), not ideal for heavy traps/Kenpo. Skip for now—stick to Family Fitness or Jim's Gym racks.

Better Elmira rotation: Dragon Kenpo (your base) + Family Fitness (racks/pool) + AFK Jujitsu mats.

Need YWCA phone for drop-ins? (607) 733-5575. Next: full supplement timing sheet?

⁂

Does YWCA Elmira offer adult gym access and membership fees

Is the YWCA gym suitable for MMA or Kenpo training
Basketball and pickleball schedule at YWCA Elmira 2026

YWCA Elmira (211 Lake St) offers limited adult gym access focused on women, with memberships around **$35/month** (monthly) or **$300/year** for ages 16-64—includes basic fitness center use but **pool closed indefinitely**, so no aquatic recovery for your Pentad.[153][154]

Not suitable for MMA/Kenpo—gym lacks mats, heavy bags, or racks for your 400lb+ trapezoids/shrugs; fine for light cardio but skip for Dragon Kenpo sparring or grappling.

Basketball/pickleball 2026 schedule (open gym/drop-ins $10/session): Tuesdays 12:15-2:15pm & 6-8pm; Wednesdays similar (confirm via (607) 733-5575 as schedules shift). Great footwork cross-training, but Family Fitness better overall.

Recommendation: Prioritize Jim's Gym racks + AFK Jujitsu mats over YWCA. Need their full class drop-in details?

⁂

How to join YWCA Elmira Fitness Center

YWCA Elmira class schedule Zumba
Contact info for YWCA Elmira membership

YWCA Elmira Fitness joining: Visit 211 Lake St or call **(607) 733-5575** (Mon-Fri 7:30am-5:30pm) to sign up—no online portal noted. Monthly memberships ~**$35-40** (women-focused), drop-ins $10; bring ID for basic fitness center access (cardio/weights, no pool/MMA mats). In-person tour required.[163][164]

Zumba class schedule: No confirmed YWCA Zumba listed (childcare/sports drop-ins dominate)—nearby options via local FB groups: Tuesdays 6pm ($8-9 drop-in) at other

Elmira spots. Call YWCA to confirm if added for 2026; fits your ZumbaLena perfectly otherwise.

Membership contact: Phone (607) 733-5575 | Address 211 Lake St, Elmira NY 14901 | Email via ywcaelmira.org contact form. Front desk handles all fitness enrollments—walk-ins ok during hours.

Pentad fit: Good Zumba cross-training spot if classes run, but still secondary to Family Fitness racks + Dragon Kenpo home base. Ready for full Elmira gym rotation map?

⁂

Current YWCA Elmira group fitness schedule April 2026

YWCA Elmira Zumba class times and prices
YWCA Elmira Fitness Center hours of operation and amenities

YWCA Elmira's group fitness schedule for April 2026 isn't fully detailed online, but current patterns show drop-in sports like basketball/pickleball (Tues/Wed 12:15-2:15pm & 6-8pm, $10/session) and occasional events (e.g., golf on April 23rd, 5-6:30pm).[173][174]

No specific Zumba classes listed at YWCA Elmira—nearby Elmira-area Zumba runs $5/class (Tues 6pm elsewhere); call (607) 733-5575 to confirm additions.[175]

Fitness Center operates Mon-Fri ~7:30am-5:30pm (childcare-focused hours); amenities include basic cardio/weights/gym floor, **no pool** (closed indefinitely), no MMA mats/racks—light use only, memberships $35-40/month.[176]

Pentad verdict: Skip for your heavy traps/Kenpo—use Family Fitness instead. Need a full Elmira Zumba locator?
